

**Analysis of the Libraries
of the Pennsylvania
State System of Higher
Education**

**Prepared by:
West Chester
Statistics Institute**

September 9, 2007

PREFACE

This report was prepared by the West Chester Statistics Institute for the Keystone Library Network, Office of the Chancellor, Pennsylvania State System of Higher Education. The West Chester Statistics Institute is a non-profit organization at West Chester University of Pennsylvania. The Institute provides collaborative statistical services by partnering West Chester University faculty members with current students in the Graduate Program in Applied Statistics at West Chester University. The data analysis and presentation for this particular project was performed by Kelley Romyn, current MS student in Applied Statistics, under the supervision of Randall Rieger, Professor of Statistics at West Chester University. Additional information about the West Chester Statistics Institute can be found at www.wcupa.edu/wcsi. The Institute can be contacted directly by e-mail at wcsi@wcupa.edu or by phone at 610-436-3234.

Summary

This analysis used data from the Academic Library Survey (ALS) and the LIBQUAL Survey to assess the strengths, weaknesses, and trends over time for the libraries of the Pennsylvania State System of Higher Education (PASSHE). Whenever possible, these libraries were compared to all pre-assigned peer institutions. Thus, this analysis was able to compare both the overall performance of PASSHE libraries, as well as the performance versus libraries at similar institutions. The report is divided into four sections. Section I used ALS data from 1998, 2000, 2002, and 2004 to investigate trends over time at PASSHE Universities. Sections II and III investigated perceived service performance at each PASSHE University and within subgroups across all PASSHE Universities. Finally, Section IV investigated the performance of the State Library of Pennsylvania.

In Section I, using the ALS data, the ‘number of librarians per 1,000 FTE’ and ‘expenditures per FTE’ were calculated and graphed for each PASSHE university over a time period from 1998 to 2004. Each PASSHE university was compared directly to peer institutions over the same time period. There was a great deal of variability from university to university in relative performance versus peer institutions over time. However, it does appear that many PASSHE universities are lagging behind their peers in ‘librarians per 1,000 FTE’ and in ‘expenditures per FTE’. Most of the PASSHE universities also seemed to perform worse relative to peers in 2004 than in previous years. These graphs, ordered alphabetically by university, can be found in Section I.

In the 2006 LIBQUAL survey, users of libraries were asked to rate the ‘perceived service performance’ of three dimensions -Affect of Service, Information Control, and Library as Place. Survey takers rated the perceived service performance on each of 22 core questions from 1 (low) to 9 (high). The average for each dimension and for each question at each PASSHE university was analyzed in this report to highlight areas of relative strength and weakness in library services at PASSHE libraries. The results of these rankings can be seen in Sections II, III and IV.

In Section II, services from each PASSHE university library were compared to library services at select peer universities, to the Keystone Library Network (KLN), and to the Association of Research Libraries – Colleges and Universities (ARL). The number of peer universities for PASSHE universities ranged from two peers (for Bloomsburg, East Stroudsburg, and Edinboro) to eight peers (for Clarion). Tables 2 – 15 on pages 32 - 45 show the comparison of each PASSHE university to its peers, to the KLN and to the ARL for each dimension and for each core question. Perhaps the most apparent overall message of these comparisons was that there is a great deal of deviation from university to university in terms of perceived service performance. Some universities like California and Mansfield consistently scored above the three reference groups in analysis of the three service dimensions, as well as above peer institutions on each individual question. However, other universities, like Edinboro and Indiana, scored consistently below the other three cohorts and below peer institutions on most individual core questions.

In Section III, the perceived service performance was compared across subgroups of the populations at each PASSHE university. These subgroups included faculty, all students, freshmen & sophomores, juniors & seniors, and masters students. The average for each core question was calculated and used to rate each service assessed. The five best and five worst services were found for each of these subgroups. While Tables 1 – 11 on pages 49 – 69 display the full results, in general, several services were consistently ranked in the top five. These were:

- Willingness to help users
- Employees have knowledge to answer user questions
- Employees who are consistently courteous

Additionally, there were several services consistently ranking in the bottom five. They were:

- Employees who instill confidence in users
- Giving users individual attention

The final task of this analysis was to assess the services provided by the State Library of Pennsylvania. In order to do so, in Section IV, perceived services at the State Library of Pennsylvania were compared to the State Library of Connecticut, the only other state library with data available. The methodology use to rate the services was the same as in Section II and Section III. For both State Libraries, the following service indicators ranked in the top five:

- Employees who are consistently courteous
- Willingness to help users
- Employees have knowledge to answer user questions
- Readiness to respond to users' questions

Three of the same core questions were among the five least satisfactory services at both libraries:

- Web site enabling me to locate information on my own
- Making electronic resources accessible from home or office
- Community space for group learning and group study.

(See Table 2 on page 73 for full rankings of all services at both state libraries).

In addition, the overall cohort of library users at the State Library of PA were stratified by age of user and directly compared to these subgroups at the PASSHE universities. The results can be seen in Tables 3 and 4 on pages 74 - 75

Section I: Trend Analysis of Library Expenditures and Employees

In this section, using data from the Academic Library Survey (ALS), trends over time in expenditures and librarians at PASSHE universities were compared to pre-determined peer institutions. Two variables - 'Librarians per 1,000 FTE' and 'Library Expenditures per FTE' - were created and used to investigate trends for each Pennsylvania State System University. The first variable derived from the original data represented 'Librarians per 1,000 FTE'. At the request of the Keystone Library Coordinator, the original variable in the raw data representing the *number of librarians* was used, rather than *librarians plus other library staff*. For the second derived variable, the variable representing *total expenses* was used.

In the 1998 and 2000 ALS survey, there was no measure of full time equivalent students (FTEs). However, the number of enrolled students (full and part-time) was collected. In the 2002 and 2004 surveys, the number of FTEs was collected. Thus, in order to study trends over time using consistent measurement, the number of full-time and part-time enrolled students was converted to full time equivalent students (FTEs) for 1998 and 2000. The conversion was done using a methodology provided by the National Center for Education Statistics. The following formula was used to convert enrollment to FTEs for 1998 and 2000:

$$\text{FTE} = \# \text{ full time students} + (0.403543 * \# \text{ of part time students}).$$

After converting from enrollment to FTEs, the estimated FTEs were checked for accuracy via both linear regression analysis and comparison to some publicly accessible FTE values. There did seem to be a tendency for slight underestimation of actual FTEs. However, this should not cause any bias in results, as it will be consistent across all universities. Therefore, the comparison of changes over time should not be systematically altered in any way due to using estimated FTE, rather than actual FTE for these two years.

For librarians, to be consistent with the National Center for Education Statistics methodology, the denominator used the variable representing the number of undergraduate FTE's multiplied by 1,000. Table 1 below displays the 'number of librarians per 1,000 FTE' for each State System University at each of the four years considered. Similarly, Table 2 displays the 'expenditures per FTE' for each year at each of the State System Universities.

Cheyney has the highest number of 'librarians per 1,000 FTE' for each year. Mansfield has the 2nd highest value in all years. California, Indiana, Shippensburg, Slippery Rock, and West Chester consistently have among the lowest number of 'librarians per 1,000 FTE'. All universities have had a decline over the course of this study in the number of 'librarians per 1,000 FTE'. In 1998, the average at all State System Universities was 2.20 'librarians per 1,000 FTE' (with a standard deviation of 0.836). By 2004, the average at all State System Universities had fallen to 1.61 'librarians per 1,000 FTE' (with a standard deviation of 0.414). The sharp decline of variance also shows that, on average,

the State System Universities have gotten appreciably closer to each other by 2004 in terms of ‘librarians per 1,000 FTE’.

Table 1: Librarians per 1,000 FTE at State System Universities				
	YEAR			
University	1998	2000	2002	2004
Bloomsburg	2.20	2.24	2.03	1.42
California	1.96	1.98	1.74	1.19
Cheyney	4.84	4.98	3.30	2.82
Clarion	2.12	1.95	1.67	1.51
East Stroudsburg	2.02	2.03	2.00	1.74
Edinboro	2.40	2.08	1.73	1.65
Indiana	1.59	1.54	1.38	1.33
Kutztown	2.02	1.87	1.83	1.51
Lock Haven	2.39	2.01	2.14	1.88
Mansfield	2.76	3.20	2.30	1.90
Millersville	2.02	2.03	1.88	1.68
Shippensburg	1.63	1.62	1.58	1.44
Slippery Rock	1.69	1.54	1.41	1.22
West Chester	1.53	1.49	1.38	1.30

Table 2: Library Expenditures per FTE at State System Universities				
	YEAR			
University	1998	2000	2002	2004
Bloomsburg	447.89	393.87	328.19	301.17
California	430.15	445.41	334.15	259.13
Cheyney	899.56	698.14	597.91	436.55
Clarion	386.62	390.41	620.43	312.02
East Stroudsburg	362.20	369.60	393.14	334.08
Edinboro	296.60	302.28	296.62	291.26
Indiana	319.56	338.41	358.84	350.57
Kutztown	336.43	343.21	320.62	255.64
Lock Haven	355.01	309.57	379.84	333.25
Mansfield	504.42	502.65	487.00	408.08
Millersville	403.53	400.46	401.66	360.71
Shippensburg	346.86	345.73	328.30	292.24
Slippery Rock	283.34	283.61	280.49	248.34
West Chester	313.61	326.07	314.05	334.05

The values in Table 2 tell a similar story to Table 1. Cheyney, followed by Mansfield, tend to have the highest ‘expenditures per FTE’. These values have trended towards becoming closer to the other State System Universities. Slippery Rock consistently showed the lowest ‘expenditures per FTE’. All universities have decreased ‘expenditures

per FTE' over time. In 1998, the average at all State System Universities was \$406.13 'expenditures per FTE' (with a standard deviation of 154.89). By 2004, the average at all State System Universities had fallen to \$322.65 'expenditures per FTE' (with a standard deviation of 55.05). The sharp decline of variance also shows that, on average, the State System Universities have gotten appreciably closer to each other by 2004 in terms of 'expenditures per FTE'.

Primary interest in this analysis was to compare the 'librarians per 1,000 FTE' and 'expenditures per FTE' with peer institutions over the 6 year interval. Thus, the 'number of librarians per 1,000 FTE' were plotted over time (at years 1998, 2000, 2002, and 2004) for each of the fourteen State System Universities. These trend lines were then compared to the combined trend line for each university's specific peers. Analysis was then repeated for 'library expenditures per FTE'.

For each State System University's comparison group, the average 'number of librarians per 1,000 FTE' and average 'library expenditures per FTE' were computed by calculating the mean of all peer institutions. Each peer institution was given equal weight in the calculation of the mean. The number of peer institutions ranged between 14 peers (Cheyney, East Stroudsburg, Kutztown, Mansfield and Millersville) up to 16 peers (California). All State System Universities had complete data for all years. All peer institutions had complete data, with the exception of Penn State Erie – Behrend (a peer institution for Lock Haven University) in 2004. Therefore, this university was not included as a peer for any year for Lock Haven. Please refer to Appendix A for a complete list of peers for each State System University.

In addition to computing the mean for each peer institution at each year, 95% confidence intervals were also computed. Without confidence intervals (or some other measure of variability), one cannot assess consistency among the means of peer institutions. Wider confidence intervals signal greater variability among peer institutions. Narrow confidence intervals indicate strong consistency among all peer institutions. Additionally, the 95% confidence intervals allow one to extend inference to all institutions of similar categorization. They can be interpreted by noting that we can be 95% confident that the true average value for all similar institutions lies within the calculated interval. Therefore, any university falling outside of this interval shows strong evidence of a systematic difference from peer institutions.

The graphs of the trend lines explained above, including 95% confidence bands, are displayed below. A brief summary of each graph is provided for additional clarification.

- Bloomsburg University (Graphs 1A & B) – 'Librarians per 1,000 FTE' were below the peer averages for all years. However, they did remain within the lower bounds of the 95% confidence intervals. 'Expenditures per FTE' were above the peer average (and 95% confidence band) in 1998, slipped to about even with peer averages in 2000, and fell below peer averages (while remaining within the confidence bands) in 2002 and 2004.

- California University (Graphs 2A & B) – In each year, ‘Librarians per 1,000 FTE’ for California was below the peer institutions’ average and below the lower 95% confidence band. ‘Expenditures per FTE’ were above the peer average in 1998 and 2000. In 2002, California was about equal to peer’s average ‘Expenditure per FTE’, but fell below peer averages (and below the lower confidence band) in 2004.
- Cheyney University (Graphs 3A & B) – ‘Librarians per 1,000 FTE’ were well above peer averages (and above the 95% confidence bands) in 1998 and 2000. In 2002 and 2004, Cheyney remained above the peer average, but got much closer and fell within the 95% confidence bands. ‘Expenditures per FTE’ for Cheyney were appreciably higher than peer averages for 1998, 2000, and 2002, appearing well above the upper 95% confidence bands. However, there is a trend of decline, falling closer to the peer averages at each point of measure, until finally falling within the 95% bands in 2004.
- Clarion University (Graphs 4A & B) – ‘Librarians per 1,000 FTE’ were slightly above peer averages in 1998, but fell slightly below peer averages in the other years, while remaining within the 95% interval. In 1998 and 2000, ‘Expenditures per FTE’ were above peer averages. In 2002, there was a sharp increase at Clarion, such that the value moved above the 95% band for peers. Conversely, in 2004, there was a sharp decrease, putting Clarion below the peers’ average.
- East Stroudsburg University (Graphs 5A & B) – ‘Librarians per 1,000 FTE’ remained below the peer averages for all 4 years. In 1998 and 2000, ESU was outside of the 95% bands, but moved much closer to peer averages in 2000 and 2002. In 1998 and 2000, ‘Expenditures per FTE’ were slightly below the peer averages, but climbed above the peers’ average (and outside of the 95% confidence bands) in 2002. In 2004, ‘Expenditures per FTE’ for ESU remained above peers’ average, but fell within the confidence bands.
- Edinboro University (Graphs 6A & B) – In 1998, Edinboro University was above peer averages (and above the 95% confidence band) for ‘Librarians per 1,000 FTE’. In 2000, 2002, and 2004, ‘Librarians per 1,000 FTE’ remained above its peer averages but within the 95% bands. ‘Expenditures per FTE’ were below peer averages for all four years, but got increasingly closer to peers averages in 2002 and 2004.
- Indiana University of Pennsylvania (Graphs 7A & B) – ‘Librarians per 1,000 FTE’ is fairly constant over time for IUP. IUP’s average remained below the 95% confidence bands of peer averages for all four years. However, IUP’s ‘Librarians per 1,000 FTE’ has gotten increasingly closer

to peers' averages over time, as they have declined slightly. 'Expenditures per FTE' show a similar trend of consistency and lag below peer averages. However, in 2002 and 2004, the averages at IUP have moved within the lower bounds of the 95% confidence bands.

- Kutztown University (Graphs 8A & B)– Kutztown showed consistently similar values to its peers for 'Librarians per 1,000 FTE', slightly above the peers' averages in 1998 and 2002, and approximately equal to peers' averages in 2000 and 2004. Kutztown was below its peers for 'Expenditures per FTE'. 'Expenditures per FTE' started slightly below the peers' average in 1998 and remained below in 2000 and 2002. By 2004, 'Expenditures per FTE' had fallen below the 95% confidence bands of peers' average.
- Lock Haven University (Graphs 9A & B) – 'Librarians per 1,000 FTE' were above the peers' averages for all years with the exception of 2000. In 2000, LHU experienced a dip, placing it slightly below the peers' average. 'Librarians per 1,000 FTE' were within the 95% confidence bands for all years. 'Expenditures per FTE' shows a similar trend, starting above the peers' average in 1998 and experiencing a dip in 2000. In 2002, LHU rebounded above the peers' average and stayed above in 2004. For 2002 and 2004, LHU remained within the 95% confidence bands of peers' average.
- Mansfield University (Graphs 10A & B) – 'Librarians per 1,000 FTE' were above the mean in 1998. In 2000, there was a sharp increase, putting 'Librarians per 1,000 FTE' well above the peers' average and outside of the 95% confidence bands. In 2002 and 2004, Mansfield's value decreased, moving just slightly above peers' average in 2002, then just slightly below peers' average in 2004. 'Expenditures per FTE' were well above the peers' averages (and outside of the 95% confidence bands) for all four years.
- Millersville University (Graphs 11A & B) –For 'Librarians per 1,000 FTE', the values were fairly constant. While Millersville's average remained within the 95% bands for all four years, it moved above peers averages in 2002 and 2004. 'Expenditures per FTE' were also fairly constant for Millersville. Because of decline in peers' averages throughout the years, Millersville moves well above peer averages in 2002 and 2004, just outside of the 95% confidence bands.
- Shippensburg University (Graphs 12A & B) – 'Librarians per 1,000 FTE' were fairly constant over time for Shippensburg. The value for Shippensburg was well below peer averages in 1998 and 2000. Due to decline in peer averages, Shippensburg's 'Librarians per 1,000 FTE' moved closer to peers averages, falling ever so slightly below the 95%

confidence bands in 2002 and 2004. 'Expenditures per FTE' were also fairly constant for Shippensburg and below its peers for all years, while remaining within the lower bound of the 95% confidence bands.

- Slippery Rock University (Graphs 13A & B) – For both 'Librarians per 1,000 FTE' and 'Expenditures per FTE', Slippery Rock was below peer averages and below the lower 95% confidence bands for all years.
- West Chester University (Graphs 14A & B) – 'Librarians per 1,000 FTE' was below peer averages (and below 95% confidence bands) for all years. 'Expenditures per FTE' were below peer averages in 1998, 2000, and 2002. However, in 2004, there was a slight increase in WCU's Expenditures, propelling WCU's 'Expenditures per FTE' above the peers' average, while remaining within the 95% confidence band.

Section II: PASSHE Libraries' Services Comparison

In this section, the 2006 LibQual survey was analyzed to provide insight into the 'perceived service performance' provided by each Pennsylvania State System of Higher Education (PASSHE) library as compared to:

- that library's peers
- the Keystone Library Network (KLN)
- the Association of Research Libraries (ARL)

The 22 core questions were broken into three dimensions:

- Affect of Service
- Information Control
- Library as Place

The actual questions are shown in Table 1. For each question, survey responders were asked to rate the perceived service performance from 1 (lowest) to 9 (highest). They were also given the option to answer "N/A". (It should be noted that the actual data does not distinguish between questions that were skipped and questions that were answered "N/A". See Section III for a more detailed discussion of this issue.) For each PASSHE university, the averages for each core question were found, as were the averages of each dimension listed above. For the latter averages, each university was compared to an average of their peers, the average of the Keystone Library Network (KLN), and the average of the Association of Research Libraries (ARL). Each PASSHE university had between two peers (Bloomsburg, East Stroudsburg, and Edinboro) and eight peers (Clarion). The number of surveys taken was 29,732 for the ARL and 13,040 for the KLN. Each PASSHE university is analyzed separately below, beginning with Bloomsburg in Table 2 and concluding with West Chester in Table 14. Each table contains two subdivisions. Part A compares each individual PASSHE university's averages in each of the three dimensions to peer institution, KLN, and ARL averages. Part B compares the specified university to each individual peer institution on a question-by-question basis. Because of the large amount of information contained in each table, a color-coding scheme was developed to assist with ease of interpretation. Averages that were lower than the PASSHE universities are shown in red. Those averages that were higher than PASSHE universities are shown in green. (Averages equal to the PASSHE university are displayed in black.) Thus, for a particular table, if the numbers are primarily green, this would indicate that the particular PASSHE university tends to perform below comparison groups. A brief summary of these results for each school is shown below.

- Bloomsburg University (Table 2) – Bloomsburg scored above its peers for both Information Control and Library as Place, but below its peers for Affect of Service. Bloomsburg scored very close to the KLN for all three dimensions and was above the ARL for all three dimensions. Bloomsburg had two peers - Humbolt and Radford.
- California University (Table 3) - California scored higher than its peers, higher than the KLN and higher than the ARL for all three dimensions. California had five peers - Morehead State, Valdosta State, Auburn University of Montgomery, Augusta State, and Central Connecticut.

- Cheyney (Table 4) – Cheyney scored lower than its peers for Affect of Service and higher than its peers for Information Control and Library as Place. The university scored higher than the KLN for Affect of Service; it was equal to the KLN for Information Control; it was below the KLN for Library as Place. Cheyney also scored higher than the ARL for all three dimensions. There were four peers that took the survey - Delaware State, Juniata College, Franklin and Marshall, and Hartwick. (Information could not be found for Mississippi Valley State, one of Cheyney's proposed peers.)
- Clarion (Table 5) – Clarion scored lower than its peers for Affect of Service and Information Control. It scored higher for Library as Place. Clarion scored below the KLN for Affect of Service and Information Control and above the KLN for Library as Place. It also scored higher than the ARL for all three dimensions. This university had eight peers – Humbolt, Truman State, Western Oregon, Eastern Connecticut State, Morehead State, Southern Oregon, Valdosta State, and Western Connecticut State.
- East Stroudsburg (Table 6) – East Stroudsburg scored higher than its peers for Affect of Service but lower for Information Control and Library as Place. It scored lower than the KLN for all three dimensions. The university scored below the ARL for Information Control and above for Affect of Service and Library as Place. East Stroudsburg had two peers – Eastern Connecticut State and Humbolt.
- Edinboro (Table 7) – Edinboro scored below its peers and below the KLN for all three dimensions. It also scored below the ARL for Affect of Service and Information Control. Edinboro had two peers – Humbolt and Radford.
- Indiana (Table 8) – Like Edinboro, IUP scored below its peers and below the KLN for all three dimensions. It scored above the ARL for only Library as Place, but was below for Information Control and above for Affect of Service. IUP had three peers – Illinois State, Indiana State and University of Montana – Missoula.
- Kutztown (Table 9) – Kutztown scored above its peers, above the KLN, and above the ARL for Affect of Service, Information Control and Library as Place. Kutztown had two peers which took the 2006 survey – Humbolt and Radford. (Information could not be found for University of Minnesota, Wayne State and Winona State – proposed peers for Kutztown).
- Lock Haven (Table 10) – Lock Haven scored above its peers for Affect of Service and Information Control, but below its peers for Library as Place. Lock Haven scored above the ARL and the KLN for all three dimensions. Lock Haven had two peers – Southern Utah and University of South Carolina.
- Mansfield (Table 11) – Mansfield scored above its peers, above the KLN, and above the ARL for Affect of Service, Information Control and Library as Place.

It had seven peers – Augusta State, Dalton State, Montana University – Billings, Nevada State, North Georgia College and State, Savannah State, and Southern Oregon.

- Millersville (Table 12) – Millersville scored above its peers for all three dimensions. It scored below the KLN in all areas. Millersville also scored above the ARL for Affect of Service and Library as Place, but not for Information Control. There were three peers – Bloomsburg, Truman State, and West Chester.
- Shippensburg (Table 13) – Shippensburg scored below its peers for Affect of Service, Information Control and Library as Place. Conversely, Shippensburg scored higher than the ARL for the three dimensions. It was equal to the KLN for Information Control, above for Affect of Service and below for Information Control. Shippensburg had two peers – Radford and Truman State.
- Slippery Rock (Table 14) – Slippery Rock scored above its peers for all three dimensions. The university scored below the KLN for Affect of Service and Library as Place, but below for Information Control. The university scored above the ARL for all three dimensions. It had two peers that took the 2006 survey – Humbolt and Radford. Slippery Rock's other peers (Central Washington, Northeastern State and Sonoma State) took the 2007 survey. Those results are not posted on the website as of 8/21/2007.
- West Chester (Table 15) – West Chester scored below its peers for Affect of Service, Information Control and Library as Place. It scored above the KLN for Affect of Service and below for Information Control and Library as Place. It scored above the ARL for all three dimensions. West Chester had three peers – Appalachian State, Towson and Western Illinois.

Table 1 – Question ID and Question Text

ID	Question Text
AS-1	Employees instill confidence in users
AS-2	Giving users individual attention
AS-3	Employees who are consistently courteous
AS-4	Readiness to respond to users' questions
AS-5	Employees have knowledge to answer user questions
AS-6	Employees deal with users in a caring fashion
AS-7	Employees understand the needs of their users
AS-8	Willingness to help users
AS-9	Dependability in handling users' service problems
IC-1	Making electronic resources access home or office
IC-2	Library Web site enabling locate info on my own
IC-3	The printed library materials I need for work
IC-4	The electronic information resources I need
IC-5	Modern equipment lets me easily access needed information
IC-6	Easy access tools allow find things on my own
IC-7	Making information easily access for independent use
IC-8	Print and/or electronic journal collections I require for my work
LP-1	Library space that inspires study and learning
LP-2	Quiet space for individual activities
LP-3	A comfortable and inviting location
LP-4	A getaway for study, learning, or research
LP-5	Community space for group learning and group study

Section III: Services in the Keystone Library Network

In this section, the 2006 LibQual survey was analyzed to provide insight into the relative ordering of satisfaction with various services provided by each library. As part of this survey, library users were asked to score the ‘perceived service performance’ for 22 core questions. For each question, survey responders rated performances from 1 (low) to 9 (high). They were also given the option to answer “N/A”.

There were 13,588 respondents to the survey within the Keystone Library Network. However, not all respondents answered every question. The number of non-responses ranged from a minimum of 199 for Question #5 (IC-2) to a maximum of 1,623 for Question #22 (AS-9). The average number of non-responses to a question was 551. There was no way to differentiate between missing responses and ‘N/A’ responses due to the way the data were recorded. Therefore, for this analysis, an “N/A” response was treated equivalently to a question that was skipped. The last three questions (“Print and/or electronic journal collections I require for my work”, “Community space for group learning and group study”, and “Dependability in handling users' service problems”) were the questions with the most non-responses, with 1065, 1223, and 1623 missing values, respectively. This may indicate an issue with the length of the survey affecting user response.

For each core question in the survey, the average perceived level of satisfaction was calculated. Greater averages indicate a higher level of satisfaction than lower averages. Table 1 shows all services ranked from best to worst in terms of average level of perceived satisfaction for all library users at all State System Universities combined. For this cohort of library users, the top five services were:

1. Employees who are consistently courteous (AS-3)
2. Willingness to help users (AS-8)
3. Employees have knowledge to answer user questions (AS-5)
4. Modern equipment lets me easily access needed information (IC-5)
5. Employees deal with users in a caring fashion (AS-6)

The lowest five scoring services were:

1. Quiet space for individual activities (LP-2)
2. The printed library materials I need for work (IC-3)
3. Library space that inspires study and learning (LP-1)
4. Giving users individual attention (AS-2)
5. Employees instill confidence in users (AS-1)

In addition to the overall average for each core question, subgroup comparisons were also conducted. Average perceived levels of satisfaction were calculated stratified by the following groups:

- faculty (n = 1,010)
- all students as a group (n = 11,660)
- freshmen & sophomores (n = 4,502)
- juniors & seniors (n = 5,937)
- Master’s students (n = 1,012)

These results are displayed in Tables 2-5, which identify the highest and lowest scoring services.

For faculty members, the highest perceived levels of satisfaction were found for:

1. Employees who are consistently courteous
2. Willingness to help users
3. Readiness to respond to users' questions
4. Employees have knowledge to answer user questions
5. Employees deal with users in a caring fashion

The lowest scoring five services for the same cohort of users were:

1. A getaway for study, learning, or research,
2. Community space for group learning and group study,
3. Library space that inspires study and learning,
4. Print and/or electronic journal collections I require for my work
5. The printed library materials I need for work

Table 2 shows all twenty-two services ranked from highest to lowest perceived level of satisfaction for all faculty members responding to the survey.

The best five scoring services among all students can be seen in Tables 3 and 4. The services were:

1. A comfortable and inviting location
2. Modern equipment lets me easily access needed information
3. Employees who are consistently courteous
4. Willingness to help users
5. Employees have knowledge to answer user questions

The lowest ranking five services for all students are seen in Tables 3 and 5. These lowest services were:

1. Employees instill confidence in users
2. Giving users individual attention
3. Library space that inspires study and learning
4. The printed library materials I need for work
5. Quiet space for individual activities

Additional subgroup analysis included comparing the highest and lowest rated five services for freshmen & sophomores, juniors & seniors, and Master's students. Tables 6 and 7 compare these subgroups across all State System Universities. Tables 8 and 9 display this comparison within each individual university. Table 8 displays the five highest rated services for each subgroup at each university while Table 9 shows the five lowest rated services for each subgroup at each university. Table 10 displays the best and worst five services for doctoral students at Indiana University. Overall, many of the same services appear to be most satisfactory across all subgroups and universities. In other words, there seem to be consistent qualities that are satisfactory (or disappointing) for all individuals across the state, regardless of student classification or university.

Finally, the Keystone Library Network (KLN) average was compared to Association of Research Libraries (ARL) College and University average for each core question. The goal was to determine how KLN institutions compare to similar schools nationally. The results of these comparisons can be seen in Table 11. The average KLN score was consistently better than the ARL score. In fact, the only question where the KLN average score was below the ARL average score was Question IC-1 (“making electronic resources accessible from home or office”). For most of the Affect of Service (AS) and Information Control (IC) questions, the KLN average was just slightly above the ARL average. However, on each of the Learning as Place (LP) Questions, the KLN average was appreciably greater.

Table 1 – Ranking of Services for all users at all schools

Services (Ranked Highest to Lowest)	
1.	Employees who are consistently courteous
2.	Willingness to help users
3.	Employees have knowledge to answer user questions
4.	Mod. equip. lets me easily access needed info.
5.	Employees deal with users in a caring fashion
6.	A comfortable and inviting location
7.	Employees understand the needs of their users
8.	Readiness to respond to users' questions
9.	Making info easily access for independent use
10.	Easy access tools allow me to find things on my own
11.	Lib. web site enabling me locate info on my own
12.	Dependability in handling users' service problems
13.	A getaway for study, learning, or research
14.	The elec. info. resources I need
15.	Print and/or electronic journal collections I require for my work

Table 12 – ID and Question Text

ID	Question Text
AS-1	Employees instill confidence in users
AS-2	Giving users individual attention
AS-3	Employees who are consistently courteous
AS-4	Readiness to respond to users' questions
AS-5	Employees have knowledge to answer user questions
AS-6	Employees deal with users in a caring fashion
AS-7	Employees understand the needs of their users
AS-8	Willingness to help users
AS-9	Dependability in handling users' service problems
IC-1	Making elec resources access home or office
IC-2	Lib Web site enabling locate info on my own
IC-3	The printed lib materials I need for work
IC-4	The elec info resources I need
IC-5	Mod equip lets me easily access needed info
IC-6	Easy access tools allow find things on my own
IC-7	Making info easily access for independent use
IC-8	Print and/or electronic journal collections I require for my work
LP-1	Lib space that inspires study and learning
LP-2	Quiet space for individual activities
LP-3	A comfortable and inviting location
LP-4	A getaway for study, learning, or research
LP-5	Community space for group learning and group study

Section IV: Services at the State Library of Pennsylvania

The State Library of Pennsylvania services state government employees. In 2006, these employees were asked the same 22 core questions relating to the Affect of Service, Information Control, and Library as Place that have been previously discussed. These questions, in the order they were posed, are displayed in Table 1. As discussed in both Section II and Section III, each survey respondent was asked to rate the perceived service performance from 1 (low) to 9 (high). The survey takers were also given the option of marking N/A. The average for each question was computed so that the best and worst perceived services could be identified. There were 498 surveys taken at the State Library of Pennsylvania. The number of non-responses to each question varied, from a minimum of 13 (Question AS-3: Employees who are consistently courteous) to a maximum of 192 (Question LP-5: Community space for group learning and group study). The average number of non-responses per question was 46. As discussed in Section III, it was not possible to distinguish between a skipped response or an 'N/A' response due to the way the information was recorded.

The State Library of Pennsylvania was compared to the Connecticut State Library (the only other State Library to take the survey). The ranking of every service is displayed in Table 2. The following services were rated among the four most satisfactory for both libraries:

- Employees who are consistently courteous
- Willingness to help users
- Employees have knowledge to answer user questions
- Readiness to respond to users' questions.

Three of the same core questions were among the five least satisfactory services at both libraries. These three were:

- Web site enabling me to locate information on my own
- Making electronic resources accessible from home or office
- Community space for group learning and group study.

It was of interest to compare similarities and differences in satisfaction with services among age subgroups. The three age subgroups compared were:

- 30-45 Years of Age
- 46-65 Years of Age
- Over 65 Years of Age

These three age groups from the State Library were compared to their peers at PASSHE universities. The number of respondents for the State Library of PA and the PASSHE universities by age group can be seen in Table 1.

Table 1 – Number of respondents for State Library of PA and PASSHE universities		
Age Group	State Library of PA	PASSHE Universities
30 – 45	143	1,384
46 – 65	300	1,370
Over 65	11	40

The top five services for each category are displayed in Table 3. The lowest five services for each age group are displayed in Table 4. The services considered most satisfactory (and least satisfactory) seem to be consistent across age groups. There also was very little difference between State Library Users and users at the PASSHE universities.

Table 2 – Services ranked from highest scoring to lowest scoring for State Libraries

State Library of PA	Connecticut State Library
1. Employees who are consistently courteous	1. Employees who are consistently courteous
2. Willingness to help users	2. Readiness to respond to users' questions
3. Employees have knowledge to answer user questions	3. Employees have knowledge to answer user questions
4. Readiness to respond to users' questions	4. Willingness to help users
5. Employees deal with users in a caring fashion	5. Dependability in handling users' service problems
6. Giving users individual attention	6. Employees deal with users in a caring fashion
7. Employees understand the needs of their users	7. Employees understand the needs of their users
8. Dependability in handling users' service problems	8. Employees instill confidence in users
9. Employees instill confidence in users	9. Giving users individual attention
10. Quiet space for individual activities	10. The printed lib. materials I need for work
11. The printed lib. materials I need for work	11. A getaway for study, learning, or research
12. Making info. easily access for independent use	12. Making info. easily access for independent use
13. The elec. info. resources I need	13. Quiet space for individual activities
14. Mod. equip. lets me easily access needed info.	14. Print and/or electronic journal collections I require for my work
15. Easy access tools allow find things on my own	15. Easy access tools allow find things on my own
16. Print and/or electronic journal collections I require for my work	16. Lib. space that inspires study and learning
17. A getaway for study, learning, or research	17. A comfortable and inviting location
18. A comfortable and inviting location	18. The elec. info. resources I need
19. Making elec. resources access home or office	19. Mod. equip. lets me easily access needed info.
20. Lib. space that inspires study and learning	20. Lib. web site enabling locate info on my own
21. Lib. web site enabling locate info on my own	21. Making elec. resources access home or office
22. Community space for group learning and group study	22. Community space for group learning and group study
